Heavy duty slotted post- Intermediate

Square Section Panel Posts
 Planed finish (not slotted). These are standard square section posts without the unique slot that our superior slotted Jakposts have. It is advisable to fix panels to posts with Jakclips when using standard posts. See page 146.

Heavy Duty Panel Posts
 Size: 91 x 91mm nominal (Planed dimension before treatment) Jakcured posts for hanging light gates etc.

Featherboard Panels slotting easily into Jakpost

Close up of Jakpost

Slotted Jakposts - or Square posts

Our slotted Jakposts are designed to work with all of our fencing panels from Jaktop and Palisade to Featherboard, and even our trellis. Jakposts are 100 x 100mm, planed finish with two 54 x 25mm slots for panels. All panels slot easily into position as shown here. Minimum height 0.6m. We have listed below the many benefits to using Jakposts as opposed to old fashioned square section post or concrete post, which we don't sell:

- All timber is Jakcured softwood guaranteed for 25 years
- Jakposts reduce damage caused by wind movement when panels are screwed to posts
- No more frost damaged cracked or chipped concrete posts
- Easy to carry - lighter than concrete posts
- Environmentally friendly
- More supportive than square section posts
- Easier to erect than concrete posts
- Complete range of panels to slot in Jakposts
- Gravel boards, capping and finials available
- Stainless steel nails used throughout

We recommend that all posts should be set in concrete. Please ask for advice when sizing gate posts.

Recommended fixings

We recommend using 6 screws per panel or 12 per panel if using capping rails. 60mm Screws, Self-Drilling Countersunk Stainless Steel are available in packs of 100 or 200 to secure panels to posts. Posts should be screwed to the panels to secure the fence run. For more screws see pages 146 - 147.

Instructions for installation of most of our products are available from our website. Alternatively we can send you a hard copy if you ask us.

jakposts and standard square posts

As a response to learning about the serious decline in hedgehog numbers - it is estimated that the current population is down to 25% - Jacksons have introduced the Hedgehog Friendly Gravel Board for use with Slotted Jakposts (shown above). We have been delighted at the response from the public and various wildlife organisations, to our raising awareness of this by offering a hedgehog friendly gravel board for use with slotted posts, to allow hedgehogs to roam freely between gardens at night and also promote the fact that solid walls and fences pose a problem to the hedgehog population.

The gravel board is similar to our standard fence panel gravel board, but it has a hole at one end, large enough to allow hedgehogs free passage, with a reinforcing strip along the top of the board to ensure it isn't weakened by the hole. You can obtain more info about the plight of the hedgehog by going to our website and searching for 'help the hedgehogs'.

For a hedgehog friendly version of the Traditional fencing (non-panel) gravel board, we suggest customers can cut the gravel board on site and by using a simple small peg to support the fence rail, as shown in the photo left. These support pegs are also used to prevent gravel boards distorting when more than one is used to increase fence height.

Gravel Boards & hedgehog friendly

You may not be aware of the important role that gravel boards play in ensuring your fencing stays in tip-top condition. They are made from a specific type of timber, that when treated intensively, are ideal for areas of the fence that are in constant ground contact. So if you install a panel with a gravel board at the bottom it does a fantastic job of protecting the panel.

Gravel Boards are also used to raise panels off the ground, give a fence extra height and add a finishing touch to a well put together run of fencing. All timber used throughout is superior quality Jakcured softwood guaranteed for 25 years

Jacksons supply two types of gravel board:

The first is a gravel board for use with our slotted Jakposts (667600). This gravel board includes two spacer blocks stopping the gravel board from being able to move when installed in the slotted posts. These spacer blocks can also be purchased separately if spares are needed (667601). We also supply a hedgehog friendly version of this gravel board (667610).

The second gravel board we supply is a 2.4m long x 150 x 25mm gravel board (230700) usually used with traditional fencing such as traditional featherboard fencing. This gravel board does not work with our slotted Jakpost system. To make a hedgehog friendly version of this gravel board, we suggest customers can cut the board on site and by using a simple small post to support the panel rail, as shown in the photo on the opposite page you can make a hole the right size for hedgehogs to move freely between gardens.

When using more than one gravel board high to increase the height of the fence the gravel boards should be held together with a support post 600 x 50 x 50mm (644400) to prevent them distorting. This should be placed centrally driven into the ground with the gravel boards screwed to it. Gravel boards are not intended to retain earth on one side of the fence, without additional support.

Please note that gravel boards need to be used to avoid panels being in contact with the ground as part the 25 year Jakcure guarantee conditions - more detail can be found on our Jakcure T&Cs page on our website or at the back of this book.

Capping for panels weathered two ways
Sawn timber triangular shaped top capping rail.

For use between posts on top of panel, this rail is the exact width of a panel. Ideal when posts are higher than the fence panel to allow for the use of decorative post caps.

Note: this capping should not be used if you want a totally flat finish when the tops of the post finish in line with the top of the panel.

Capping Rails Finials & Post Caps

Post caps, finials and capping rails all add a finishing touch to a well put together run of fencing. Some people may think a post without a cap or finial looks unfinished, you can judge this for yourself, the top photo on the left shows ball finials on the posts, which punctuate the curves of the trellis topper panels.

The photo below it shows a very smart run of our Venetian panels that have capping rail, running flush with the post and panel tops, it finishes off the top of the fence beautifully.

We have a selection for you to choose from here, all manufactured from superior quality Jakcured softwood to match our panels and all are guaranteed for 25 years.
