

Anti-Climb Express Temporary Fencing panels are constructed from galvanised tube frames with welded mesh infill. They are 2.0m high x 3.5m wide, clad with 38 x 253mm mesh. Standard have 38mm uprights with a 25mm top & bottom rail. Heavy duty panels have a 38mm frame throughout. It is easy to create a gate at any point on the perimeter. Express panels are economical as they can be used time after time. Panels stack easily and can be delivered accompanied by fork lift for easy distribution. They are surprisingly light and easy to handle. It is possible to erect four metres a minute.

Temporary Fencing	Ref
Anti-Climb Heavy Duty	050010 ●
Anti-Climb Standard	050008 ●
Pedestrian gate 2m high,x 1m wide	050200 ●
