

Featherboard Panels

One of the strongest types of fencing available, our featherboard panels take a traditional close board, or featheredge fence design and make it better and more convenient with an improved quality design. Featherboard panels are constructed with 2 or 3 rails, clad with 100mm pales to provide one of the strongest close board panel fences available.

Featherboard panels are available with Level, Concave or Convex Top options.

Featherboard panels are designed for use with our slotted Jakposts, see pages 46 - 47 and manufactured from superior quality, Jakcure® treated softwood, guaranteed for 25 years. Stainless steel fixings are used throughout for longer life.

Featherboard panels are 1.83m wide and available in a range of heights, detailed below. Panels may be cut to a desired width on site. It is also available in Kit Form, referred to as Traditional Featherboard System, see pages 44 - 45. For matching gates please see pages 62 - 66.

To meet the conditions of the 25-year Jakcure® guarantee, gravel boards are required where panels are in contact with the ground, see pages 48 - 49, and any timber cut on site must be treated with Jakcure® End Grain Treatment, see page 51.

Please note: There is no need to apply any further timber protection treatment to your Jacksons Jakcure® treated product. Some customers might want to add colour to their Jacksons products. In these cases, please be aware that timber will naturally take a while to dry, during which, natural shrinkage can occur, so we recommend that you don't apply any colour coatings until the timber is fully dry and stable.

Panels shown with optional capping rails.

Vertical Tongue & Groove Effect Panels

Our vertical Tongue and Groove effect panels are a mainstay of our premium panels range and are available with a Level or Convex top. They feature a mortice and tenon jointed frame for extra strength while the infill is constructed using vertical Tongue and Groove Effect boards, which incidentally match the infill used on our Courtyard Gates, see pages 96 - 97.

The centre of the panel is given additional support with one or two 70mm wide rails depending on the fence height. Panels are 1.83m wide, with heights of 0.91m to 1.83m. Top and bottom rails are 70mm x 51mm and sides of 45 x 51mm.

Panels are available in five heights from 0.91m to 1.83m x 1.83mm wide with the option to use a panel width cut-down kit if required. Standard Tongue and Groove panels have 21 pales.

Tongue and Groove effect panels are designed for use with our slotted Jakposts, see pages 46 - 47 and manufactured from superior quality, planed finish Jakcure® treated softwood, guaranteed for 25 years.

Stainless steel fixings are used throughout for longer life. For matching Brook garden gates please see pages 62 - 66.

To meet the conditions of the 25-year Jakcure® guarantee, gravel boards are required where panels are in contact with the ground, see pages 48 - 49, and any timber cut on site must be treated with Jakcure® End Grain Treatment, see page 51 or please visit our website.

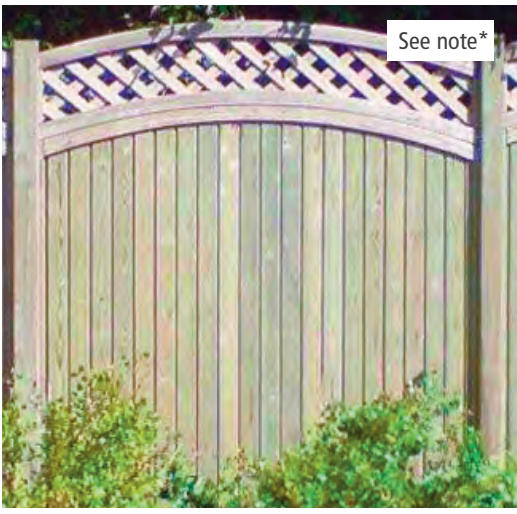

Please note: There is no need to apply any further timber protection treatment to your Jacksons Jakcure® treated product. Some customers might want to add colour to their Jacksons products. In these cases, please be aware that timber will naturally take a while to dry, during which, natural shrinkage can occur, so we recommend that you don't apply any colour coatings until the timber is fully dry and stable.

This chunky diamond trellis is only for use as a topper panel on Convex Tongue and Groove effect panels (sold separately). The trellis measures 1.83m wide x 300mm high, with planed finish. (745300)

Horizontal Tongue & Groove Effect Panels

Horizontal Tongue and Groove effect panels are similar to their vertical counterpart panels making them a mainstay of our premium range but the boards run in a horizontal manner and are only available with a level top. They feature a mortice and tenon jointed frame for extra strength while the infill is constructed using horizontal Tongue and Groove effect boards.

The centre of the panel is given additional support with one or two 70mm wide rails depending on the fence height. Panels are 1.83m wide, with heights of 0.91m to 1.83m. Top and bottom rails are 45mm x 51mm and sides are 70 x 51mm.

Panels are available in five heights from 0.91m to 1.83m x 1.83mm wide with the option to use a panel width cut-down kit if required. Horizontal Tongue and Groove effect panels have 21 pales.

Horizontal Tongue and Groove effect panels are designed for use with our slotted Jakposts, see pages 46 - 47 and manufactured from superior quality, planed finish Jakcure® treated softwood, guaranteed for 25 years.

Stainless steel fixings are used throughout for longer life. For matching Brook garden gates please see pages 62 - 66.

To meet the conditions of the 25-year Jakcure® guarantee, gravel boards are required where panels are in contact with the ground, see pages 48 - 49, and any timber cut on site must be treated with Jakcure® End Grain Treatment, see page 51 or please visit our website.

Please note: There is no need to apply any further timber protection treatment to your Jacksons Jakcure® treated product. Some customers might want to add colour to their Jacksons products. In these cases, please be aware that timber will naturally take a while to dry, during which, natural shrinkage can occur, so we recommend that you don't apply any colour coatings until the timber is fully dry and stable.

Railing Toppers

Designed to fit on top of our premium framed panels, Railing Toppers add a touch of elegance and extra security to your garden.

Like all of our panels, Railing Toppers slot easily into our sturdy Jakposts - see pages 46 - 47.

Available in three styles; Level, Concave and Convex Top, the durable galvanised and powder coated steel panels feature finials and collars to alternate pales. Alongside added security, the other benefit of the slender metal topper panel is the extra light it offers, important if your garden suffers from lack of sunlight.

All toppers are 1830mm wide. The Level Top panel is 450mm high. The Concave panel is 315mm at its lowest point, 450mm at the sides. The Convex panel is 585mm at the highest point and 450mm at the sides.

The top rail is constructed using 50mm x 6mm flat bar with 12mm vertical pales, while the bottom and side rails are of 50mm x 25mm steel box section, drilled with 6mm holes for fixing to the posts and fence top rail/wall for added rigidity and to prevent removal.

Manufactured from galvanised steel for extra long life and a 25 year service life guarantee. Polyester powder coated black with a range of other colours available at additional cost.

Main photo shows Hit and Miss Horizontal panels with optional capping rails.

Hit & Miss Panels

Hit and Miss panels are so called because the boards are alternately fixed on the front and the back of the panel with an over-lap to create a stylish Hit and Miss pattern. They are part of our premium ‘good-both-sides’ range so that both you and your neighbour have the best looking side of the fence, as both sides are the same.

Hit and Miss panels are available with the boards running horizontally or vertically (please note that it is just possible to see through the panels). Whichever style you choose you still benefit from less wind resistance, as air can pass through the gaps.

Panels are 1.83m wide with a 45mm x 50mm frame. The spacing of boards varies slightly on different height horizontal Hit and Miss - for ease of alignment, we recommend vertical style panels are used when different heights are used in a run.

Our Hit and Miss panels are available in four heights, all at 1.83m wide and they are designed for use with our slotted Jakposts, see pages 46 - 47, and manufactured from quality, planed finish Jakcure® treated softwood, guaranteed for 25 years. We also use stainless steel fixings throughout for longer life. For matching gates please see pages 62 - 66.

To meet the conditions of the 25-year Jakcure® guarantee, gravel boards are required where panels are in contact with the ground, see pages 48 - 49. If you have to cut down a panel on site then use the following kit reference for all panel sizes. Always use Jakcure® End Grain Treatment on cut timber, see page 51.

Please note: There is no need to apply any further timber protection treatment to your Jacksons Jakcure® treated product. Some customers might want to add colour to their Jacksons products. In these cases, please be aware that timber will naturally take a while to dry, during which, natural shrinkage can occur, so we recommend that you don't apply any colour coatings until the timber is fully dry and stable.

Louvre Panels

Jacksons Louvre panels offer the sleek good looks suited to contemporary gardens. The horizontal slats are made from planed and shaped Jakcure® treated timber, secured to create an angle - reminiscent of louvre blinds - unlike the straight sided slats of our Venetian fencing. The slats are also larger which gives greater privacy than Venetian - yet still let in light and offer less wind resistance than solid panels, like Chilham or Tongue and Groove Effect panels.

Louvre panels are designed for use with our slotted Jakposts, see pages 46 - 47, and manufactured from superior quality, planed finish Jakcure® treated softwood, guaranteed for 25 years.

Stainless steel fixings are used throughout for longer life.

Four panel heights available, all at 1.83m wide.

For garden gate options please see pages 62 - 66.

To meet the conditions of the 25-year Jakcure® guarantee, gravel boards are required where panels are in contact with the ground, see pages 48 - 49, and any timber cut on site must be treated with Jakcure® End Grain Treatment, see page 51.

Please note: There is no need to apply any further timber protection treatment to your Jacksons Jakcure® treated product. Some customers might want to add colour to their Jacksons products. In these cases, please be aware that timber will naturally take a while to dry, during which, natural shrinkage can occur, so we recommend that you don't apply any colour coatings until the timber is fully dry and stable.

The panels can be cut to width on site with the original side batten being re-used in the new position.

Panels shown with optional capping rails.

Venetian Panels

One of our most popular designs and a favourite of garden designers. The strikingly attractive Venetian panel is another panel ideal for creating a dramatic light and shade effect in your garden as it allows light to pass through its horizontal slats. It also offers less wind resistance than solid panels.

Venetian panels are designed for use with our slotted Jakposts, see pages 46 - 47, and manufactured from superior quality, planed finish Jakcure® treated softwood, guaranteed for 25 years. We also use stainless steel fixings throughout for longer life. Six panel heights are available, all at 1.83m wide. A panel width cut-down kit is also available. Spacing between pales - 15mm.

For matching gates please see pages 62 - 66.

To meet the conditions of the 25-year Jakcure® guarantee, gravel boards are required where panels are in contact with the ground, see pages 48 - 49, and any timber cut on site must be treated with Jakcure® End Grain Treatment, see page 51.

Please note: There is no need to apply any further timber protection treatment to your Jacksons Jakcure® treated product. Some customers might want to add colour to their Jacksons products. In these cases, please be aware that timber will naturally take a while to dry, during which, natural shrinkage can occur, so we recommend that you don't apply any colour coatings until the timber is fully dry and stable.

The panels can also be used in combination with other panels. We experimented by stacking two 0.907m panels on top of each other to create a 1.83m high Venetian Hit & Miss panel - next to a 1.2m vertical Tongue & Groove effect panel with a 0.607m Venetian Hit & Miss panel on top. It's an attractive and unusual effect when you alternate these in a run. Taller variants can be achieved by stacking more panels, up to 2.4m tall, using heavy slotted posts. Please note you may require planning permission from your local planning department for taller fences, so please do check.

Here our Venetian Hit and Miss are crafted with two 0.907m panels stacked to create a 1.807m high panel. Photo also shows recommended capping.

Venetian Hit & Miss Panels

Just like our original Venetian panel, the frameless Venetian Hit and Miss panel retains a contemporary and sleek look that complements both modern and traditional gardens. Venetian Hit and Miss panels are part of our ‘good-both-sides’ range and feature horizontal slats on both sides of the panel with an over-lap which means air and light can still pass through, but visibility through the panel is largely obscured.

Constructed using 45mm x 16mm horizontal slats with a gap between the slats of approximately 30mm (which is larger than standard Venetian).

Venetian Hit and Miss panels are designed for use with our slotted Jakposts, see pages 46 - 47, and manufactured from superior quality, planed finish Jakcure® treated softwood, guaranteed for 25 years. Stainless steel fixings are used throughout for longer life.

The additional slats required to make these panels ‘good-both-sides’, also makes them quite heavy, so for ease of handling we offer them in two heights both at 1.83m wide along with a panel width cut-down kit. To achieve a taller fence, the panels can be stacked - for example stacking two 0.907m panels will give you 1.807m high.

We recommend using capping rails to add the finishing touch to these frameless panels. For matching garden gates please speak to our sales team.

To meet the conditions of the 25-year Jakcure® guarantee, gravel boards are required where panels are in contact with the ground, see pages 48 - 49, and any timber cut on site must be treated with Jakcure® End Grain Treatment, see page 51.

Please note: There is no need to apply any further timber protection treatment to your Jacksons Jakcure® treated product. Some customers might want to add colour to their Jacksons products. In these cases, please be aware that timber will naturally take a while to dry, during which, natural shrinkage can occur, so we recommend that you don’t apply any colour coatings until the timber is fully dry and stable.
